Contents

51  WUWHS supplement
The first of this year’s two WUWHS supplements contains articles reflecting different practice and experiences from around the world along with international collaborations. Among the articles, there is an analysis of the real-life data collect in France and Germany using TCL-NOSF dressings, the use of compression with an arterial leg ulcer and an examination of the prevalence rates of skin tears in nursing home residents in Denmark.

51  Efficacy and safety of a new coverlet device on skin microclimate management: a pilot study in critical care patients
The authors monitored the skin humidity through surface skin impedance and temperature via an infra-red thermometer. They assessed the occiput, scapulas, buttocks and sacsum of 34 patients before and during the use of the device. O. Fiske, J. Massedieu, D. Coadic, V. David, P. Trouiller, B. Strymy

58  Clinical evaluation of a bioactive beta-glucan gel in the treatment of ‘hard-to-heal’ wounds
In this evaluation the reduction in wound surface area and the number of wounds healed in 26 patients is examined. B. King, S. Barrett, K.F. Cutting

66  The effects of Tarantula cubensis venom on open wound healing in rats
Using an animal model of wound healing, the effects of the venom extract on epithelialisation, wound contraction and the histopathology of the wound area are determined. N.Y. Gul Satar, I.T. Cangul, A. Topal, H. Kurt, V. Ipek, G.I. Ozel

72  Use of negative pressure wound therapy after vulvar carcinoma: case studies
Following a complete radical vulvectomy with bilateral inguinal lymph node dissection, two patients who developed infection and wound breakdown postoperatively are treated with NPWT. E. Raimond, A. Pelissier, M. Etienne Emerin, C. Francois, O. Gressolin

49  Editorial—Fix rooms could prevent infection in addicts  C. Fronzo
