**Sagentia**

Sagentia is a product-development and technology consultancy. We work with clients to develop technically complex products that are easy to use and commercially viable. This involves understanding and analysing early stage science and technology, generating new product concepts and models, and then taking these all the way through to full development.

**Why work for us**

We use science and technology to help companies make better R&D decisions and develop more successful products for their markets. This can involve working with clients in a number of ways: from identifying areas for innovation and designing new technologies, through to developing products and services, and bringing them to new or existing markets. You will get the opportunity to gain incredible knowledge and work with like-minded colleagues, be part of a great team culture and workplace.

**Training and development**

One of the great things about Sagentia is that we are small enough that if you make a difference, you will be noticed. Being part of Science Group consultancy means that we are big enough to have a whole range of opportunities where you can develop your career. We offer:

- Core training courses to expand graduates’ knowledge
- Career and salary reviews
- Technical, commercial and operations career paths
- Opportunity to work in multidisciplinary teams alongside experienced technical and market experts
- A feedback and support process to allow personal growth and development

**Graduate schemes**

Whether you’re an experienced hire or a graduate, we are always looking for exceptional people to join our team. If you don’t see a vacancy to fit, but feel you could bring enthusiasm and curiosity to our teams, then we are always happy to hear from you.

**What we are looking for**

Our best recruits are smart and curious. Those who thrive here bring a depth of knowledge in their field and relish variety. For us, this means working with a team of diverse professionals on a broad and constantly changing range of R&D challenges. Our working environment is creative and innovative with a solid commercial focus.
